

Assumptions and limitations:

- There has to be at least one payment for each subscription (made at the time of buying).
- The given model does not ensure that a given show can either be a film or a series, and not both at the same time.
- An increment is done in the attribute “#times watched entirely” whenever the stopped time for any viewed film/episode equals its duration.
- There cannot be two same ranks in “Position in top 10”. This can further be ensured by making the rank attribute of type ENUM() with 1-10 as values.
- Each time a show secures a position in Top10, an increment is done in the attribute “#times in top 10” of the SHOW entity.
